- * To receive terrestrial digital broadcasts, it is necessary to have the corresponding TV antenna.
- * Even if the antenna and this product are set up properly, and correctly connected, reception of terrestrial digital broadcasts will be impossible in countries without terrestrial digital broadcasting.
In addition, various problems may occur such as blocking of signals by neighboring buildings, inability to receive weak signals, only being able to receive specific broadcasting channels, audio cutting out, and stopping of video, and appearance of block noise.
- * Topographic conditions as well as weather conditions have great influence on TV terrestrial reception range.
- * Pay broadcasts (scrambled broadcast) cannot be viewed.
